Ravi Kunju
Chief Product and Strategy Officer

As chief product and strategy officer, Ravi Kunju is responsible for the strategy and vision of Altair products, which includes facilitating the development, sales, pricing, and marketing of Altair's solutions for multiple industry verticals, across all business lines. He most recently served as the senior vice president of product strategy and pricing for Altair's software solutions where he established and launched the go-to-market strategy for the Altair Units business model. He also led the analytical team responsible for customer software usage data, including royalty payments and reports for the Altair Partner Alliance.

Previously, Kunju held several leadership roles at Altair including vice president of business strategy for Altair's manufacturing solutions, vice president of strategy for enterprise computing, managing director of enterprise computing for the Americas, and managing director of the U.S. North Central region.

Prior to joining Altair, Kunju was a project engineer at Ford Motor Company and a structural analyst at Chrysler Corporation.

Kunju holds a bachelor's degree in mechanical engineering from Osmania University in Hyderabad, India; a master's degree in mechanical engineering from Wayne State University; and an MBA from the University of Michigan's Ross School of Business.
