

# STAFFING SERVICES SAVE COST AND TIME

## ALTAIR® MONARCH® SPEEDS UP ACCOUNTS RECEIVABLE PROCESS BY 90% WHILE IMPROVING ACCURACY

### Background Information

Client Engineering Services (CES), a division of Altair, began by providing technical staffing focused on engineering and simulation. Driven by a massive increase in demand for technical talent, CES rapidly grew to meet the staffing needs of businesses around the globe. Like many organizations, as CES's business grew so did the amount of operational data it generated. However, the group's internal systems and processes did not evolve to match the data growth. With numerous sources of data to merge and review, their manual process was no longer efficient to keep up with the pace of growth.

### About the Customer

With 35 years of experience, today, CES operations include servicing more than 11,000 companies globally, with more than 400 consultants on-site. It also has expanded to include technical staffing of the best candidates in design, engineering, the Internet of Things, high-performance computing (HPC), and data analytics. CES is headquartered in Troy, MI including eighty-six offices in twenty-five countries.

### Their Challenge

While seamlessly providing the best service to their clients, the operations team at CES was still spending countless hours manually preparing data and creating the accounts receivables, open order audit, and revenue forecasting reports. Not only was this process time consuming, the volume of data from disparate sources and manual data entry increased the risk of errors and inaccurate reports.

## Our Solution

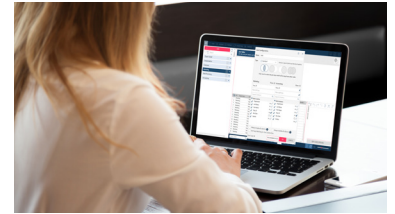

By integrating Altair Monarch, the data preparation process was streamlined by enabling the operations team to seamlessly merge multiple spreadsheets and format into correct date columns using only the relevant data – without manual work. Additionally, the data was easily broken down into regions, customers, and other specific details as needed.

## Results

The CES team saved more than 15 hours per week by streamlining their data preparation process with Monarch. The time spent in tedious meetings combining data is now better utilized analyzing and generating valuable insights. In addition, Monarch removed all human transposing errors, improving accuracy. The team can now generate reports and insights in minutes instead of hours. Reducing their order audit reporting and accounts receivable from 15-30 minutes per day down to three minutes empowers them to do other proactive tasks to help propel the company forward.
