ACCELERATE THE POWER OF AI WITH ALTAIR'S AI ASSESSMENT

Are you ready to harness the power of AI but unsure where to begin? Many business leaders remain uncertain about AI, questioning its real-world impact, scalability, and ability to deliver tangible return on investment (ROI). The Altair AI Assessment is designed to help you navigate complexity, identify high-impact opportunities, and unlock measurable value— from day one.
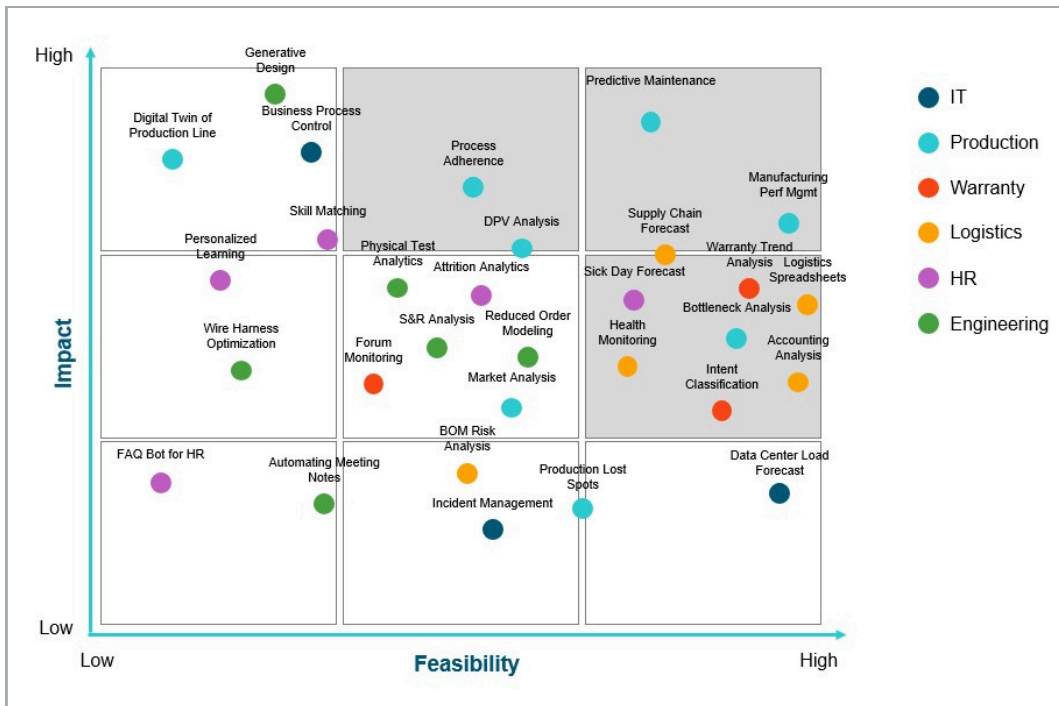

What is the Altair AI Assessment?

The Altair AI Assessment provides a clear roadmap to implement AI solutions tailored to your organization's unique needs. Our methodology evaluates a portfolio of use cases based on two key dimensions:

- Technical Feasibility: Can the business challenge be reframed as a data analytics problem? We evaluate how clearly the problem is defined, whether the necessary data is available and structured properly, and if proven analytics or machine learning methods can be applied.
- Business Value: What is the potential for measurable improvement? We assess the expected impact on key performance indicators, the quantifiable gains in efficiency or cost, and the overall return on investment.

Together, these criteria help us rank and prioritize your use cases, giving you the most valuable business opportunities. Our team brings decades of experience and a proven track record with thousands of customers, turning data and AI initiatives into real-world production success and measurable ROI.

How Does It Work?

The Altair AI Assessment is hands-on and collaborative, starting with onsite workshops and stakeholder engagement. Our process includes:

- Whiteboarding sessions and discovery
- Data readiness and infrastructure evaluation
- Use case profiling, impact analysis, and operationalization strategy

Then, we provide a step-by-step roadmap to move forward from isolated efforts to enterprise-scale AI.

Where AI Delivers Value

Altair supports AI transformation across a wide range of functions and industries. Common areas of impact include:

- Manufacturing and Quality: Predictive maintenance, root cause analysis, digital twins
- Finance and Risk: Fraud detection, credit analytics, collections optimization
- Supply Chain and Operations: Inventory planning, freight optimization, demand forecasting
- Sales and Marketing: Price prediction, churn reduction, customer sentiment analysis
- Engineering and R&D: Simulation acceleration, material predictions, anomaly detection

Let's Get Started

The Altair AI Assessment gives you a structured, practical starting point and roadmap to enterprise scale that's backed by deep expertise. If you're ready to move from vision to action, we're here to give you the structure, clarity, and guidance needed to turn your data into decisions—and your decisions into results.
